DETAILED ACTION

In view of the Appeal Brief filed on 4/7/2003, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 27 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Bellamy et al. (US 4,747,783).

Bellamy et al. disclose a connector assembly comprising:

a first contact (11) and a mating contact (19);

Art Unit: 2833

the first contact configured for slidably engaging the second contact to continuously define an electric connection between the first contact and the second contact and comprising:

a conductive material (11) having first resistivity; and

a resistive material (13, 15) having second resistivity significantly higher than the first resistivity and being exposed for direct, initial engagement with the second contact to produce an initial high resistance connection along a shortest path between the second contact and the conductive material.

Response to Arguments

The request by Applicant filed on 10/23/2003 is accepted.

Applicant's arguments, see Appeal Brief, filed on 4/7/2003, with respect to the rejection(s) of claim(s) 27-28 under 35 U.S.C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Bellamy et al. (US 4,747,783) alone.

The examiner has a different interpretation of the Bellamy's reference which would read on the Applicant's claims. The examiner's interpretation as follows:

The resistive portion of Bellamy includes two layers (13, 15). This resistive portion is in indirect contact with the conductive portion (11), and therefore it provides a shortest path of conduction. The layer 15 is an insulation which has a maximum resistive coefficient. Both of layers 13 and 15 combined into a resistive portion that provides a resistive significantly greater than the resistive of the conductive portion (11).
